

Use-Case Flow Specification

Problem Statement #60 — Podcast Guest Scheduling & Outline Builder

Name: Dhanush S SRN: PES1UG24AM360 Section: F

Use Case ID	UC-01
Use Case Name	Book Interview Slot
Primary Actor	Podcast Guest
Supporting Actors	Show Host (notified); Calendar & Notification Service
Traces to	FR-001, FR-002, FR-005, NFR-002
Trigger	The Guest opens the episode invitation link and chooses to book a recording slot.

Preconditions

1. The Guest has been invited to a specific episode and holds a valid, unexpired invitation token.
2. The Show Host has published at least one availability window for that episode (UC-03).
3. The Calendar & Notification Service is reachable.

Postconditions (on successful completion)

1. Exactly one slot is reserved against the episode and is no longer offered to any other guest.
2. A calendar invite has been dispatched to both the Guest and the Show Host.
3. The episode board shows status “Slot Confirmed” with the reserved date, time and time zone.
4. A reminder notification is queued for 24 hours before the slot start time.

Main Success Scenario

1. Guest opens the episode invitation and selects “Book Interview Slot”.
2. System authenticates the invitation token and loads the corresponding episode board.
3. System retrieves the Host’s published availability windows and removes all blocked dates.
4. System displays the remaining bookable slots, rendered in the Guest’s local time zone.
5. Guest selects a slot and confirms the selection.
6. System performs «include» Validate Slot Availability — re-checking that the slot is still free and does not fall on a blocked date.
7. System reserves the slot and writes the reservation to the episode board.
8. System performs «include» Send Booking Notification — dispatching a calendar invite and a confirmation email to both Guest and Host through the Calendar & Notification Service.
9. System queues the 24-hour reminder notification.
10. System displays a confirmation showing the booked date, time and time zone.
11. Use case ends successfully.

Alternate Flow — 6a. Slot taken by another guest during selection

- 6a1. Validate Slot Availability finds that the slot was reserved by a different booking after step 4.
- 6a2. System does not reserve the slot and displays “That slot has just been taken.”
- 6a3. System refreshes the slot list and the flow returns to step 4.
- 6a4. If no bookable slots remain, the System notifies the Show Host that further availability is required and the use case ends without a booking.

Alternate Flow — 8a. Calendar & Notification Service unavailable

- 8a1. Dispatch of the calendar invite fails.
- 8a2. The reservation made in step 7 is retained; it is not rolled back.
- 8a3. System queues the invite for retry (3 attempts, 5 minutes apart) and displays “Booking confirmed — your invite will arrive shortly.”
- 8a4. If all retries fail, System flags the episode board and notifies the Host in-app.
